SoftTouch Touchless Sign-on™

Imagine never swiping another employee ID card, punching in employee access codes or having to wipe the grease off those biometric scanners? Touchless Sign-on™ is the world's fastest POS employee authentication system. Employees simply wear Touchless wristbands, which trigger an automatic sign-on as they move their hand toward the POS touch-screen. Touchless Sign-on™ - another POS innovation exclusively from SoftTouch.

Touchless Sign-on™

Imagine servers and bar tenders accessing their POS stations hundreds of times every day and night. Each time having to swipe a card, enter a security code or align a finger on a biometric scanner. This inefficiency not only wastes valuable time, but wears out costly swipe cards and magnetic readers. The result is money out of our pocket.

The innovation team at SoftTouch has resolved this costly inefficiency by introducing Touchless Sign-on™. The world's fastest POS authentication technology. It's so simple, there's no training necessary. Just slide on the Touchless Sign-on™ wristband and start using the POS workstation. The patent pending Touchless Sign-on™ proximity scanner automatically detects the wrist band and signs onto the POS workstation as the wearer moves his finger toward the POS touch-screen.

Dynamic Wristband Assignment

Tired of your staff losing their ID Swipe Cards? Touchless Sign-on™ wristbands can be temporarily assigned to the wait staff for the duration of their shift, which means they leave the wristbands at your facility. The best part is, you don't need a manager to assign them!

Frequently Asked Questions

Q: Are the wristbands expensive?

A: No, they are actually priced about the same as magnetic swipe identification cards.

Q: What happens if I lose a wristband?

A: When using Dynamic Wristband Assignment, the wristbands are automatically deactivated at the end of the shift, so lost wristbands pose no security risks at all.

Q: Do the wristbands wear out?

A: The wristbands are made of rugged silicone or nylon and cannot be easily damaged. They are waterproof and grease or food stains will not affect them.

Q: How many Touchless Sign-on scanners do I need?

A: We recommend one scanner per workstation for optimal performance.

Loyalty Guest Key Fobs

Install a Touchless Sign-on™ scanner at your SmartHost™ station and your guests can scan their loyalty key fobs for instant point awards and VIP seating preference recall.
